Notes
- "Related" tags are based on selected tags only.
  - "Related tags" are limited to those present in the search results (if in Search mode), or the full data set (in Browse mode).
- Related tags are not individually selected—it's all or none.
  - **It's essentially a "show me more" button.**
- Related tags, when selected, are ORed with the selected tags.
  - Related results are shaded differently.
- Related tags, if selected, are NOT automatically selected in the primary tag list (i.e. the top half)…
  - …but they may be selected manually (and thus ANDed before being ORed).
- Result set is larger than initial result set.
